Setup Personalization — Privacy Guide

amazon.com · Last updated: October 15, 2024

Overview

This guide explains what happens when Amazon.com personalizes your setup experience. We want you to understand exactly what information we collect, why we collect it, and what choices you have — before you decide.

What is Setup Personalization?

When you visit Amazon.com for the first time or set up the Amazon Shopping app on a new device, we run a process called Setup Personalization. This process looks at certain details about your device and your past interactions with Amazon to make your first few minutes on the site or app feel less confusing. For example, instead of showing every customer the same 12-step setup wizard, we might skip the steps you have already completed, suggest categories you have browsed before, and pre-fill settings we believe match your preferences.

What Information We Collect

During Setup Personalization, we may collect and use:
